Environmental Policy Animex Foods

Environmental policy is the common policy of Animex Foods plants Sp. z o. o. used to improve production activities related to the production and processing of meat and feather production while simultaneously and continuously improving environment.

Being fully aware that each of our industrial activities, to a greater or lesser extent, affects the natural environment, we strive to limit this impact. We consider it as important element of the operating and development strategy of our plants, ensuring environmental protection and following the principle of sustainable development in our activities.

We demonstrate our responsibility by minimizing negative impact on the natural environment, meeting legal and corporate requirements and continuously improving our environmental management system.

We fulfill our obligations through:

- Optimizing the amount of waste generated as a result of our processes and improving waste management,
- Reducing the amount of natural resources used per unit of production,
- Supervision of processes related to the production and pre-treatment of sewage,
- Reducing the likelihood of failure of cooling installations in meat plants, which may result in uncontrolled emission of pollutants into the environment,
- Supervising, to the extent consistent with our environmental management system, external companies providing services that could have an adverse impact on the environment.

All employees of Animex Foods. support and actively participate in the process of implementing the Environmental Policy, and through their attitude and actions they ensure its implementation.
